

Re: **UPDATE to Manure Spreading Advisory #2 - 2009: South Coastal Region**

Date: June 1, 2009

The following advisory is produced by government, in partnership with industry, to provide guidance to farmers regarding the *Agricultural Waste Control Regulation* and the *ENVIRONMENTAL MANAGEMENT ACT*. If a discrepancy arises between this document and the legislation, the legislation takes precedence. Following this advisory does not relieve anyone from their obligations under the LEGISLATION. The Province of British Columbia does not guarantee the accuracy or completeness of the information referenced here from legislation, and in no event is the Province liable or responsible for damages of any kind arising out of its use.

Reminder: careful manure application is suitable on many sites. See Advisory #2 - 2009 for details.

To avoid crop damage from manure spread during hot weather, try to time manure applications on grassland just before a light to moderate rainfall event, but avoid application before prolonged or heavy precipitation events*.

Expect the next advisory to be released near the beginning of September or later if the summer extends longer than usual.

***As a general guideline, manure application should be avoided if greater than 10 mm of rain is forecast for any day in the five-day forecast.**
